**SMARTBOARD INSTALLATION AT OVERNEWTON
ST HILDA'S NEW PROJECTOR
VITTA CONFERENCE A SUCCESS
IGS'S MULTI PURPOSE AREA FIT FOR A KING**

*Epson EMP81
Projector*

SMARTBOARD INSTALLATION AT OVERNEWTON

DIB Australia was proud to assist Overnewton Anglican Community College at their Taylors Lakes campus with the

installation of Smartboard Interactive Whiteboard equipment. DIB Australia installed this equipment into a computer room, complete with a ceiling mounted EPSON projector and Joey Micro (6 button) wall mounted control panel for ease of use. The system was enhanced with self-amplified stereo speakers for solid audio re-enforcement. The result was a simple ready to use classroom complete with the latest in educational technology.

ST HILDA'S NEW PROJECTOR

DIB have continued their relationship with St Hilda's College by installing an Epson EMP-82 Projector into their student common room. Being one of the residential colleges at prestigious Melbourne University, St Hilda's now offers students residing on Campus a place to relax and watch DVD's or TV, in particular the upcoming Commonwealth Games on a large screen.

VITTA CONFERENCE A SUCCESS

Our VITTA Conference stand

The VITTA (Victorian Information Technology Teachers Association) Conference was held again in November 2005 at Flemington racecourse, and for the first time DIB Australia were present with a stand displaying the latest and greatest in educational Audio Visual technology. The response from teachers throughout Victoria was phenomenal with particular interest being focused around our Mimio Interactive Whiteboards and Digital Video Commanders (DVC). Digital Video Commander was launched in Victoria at VITTA, and DIB were proud to be joined by Command Systems, the creators of the product. DVC is the digital successor to the hugely successful Video Commander video distribution system, and when coupled with DIB's projector installation, it largely highlights the future direction of classrooms across Victoria.

Look out for us next year in conferences across the state, including VITTA. DIB also perform onsite demonstrations, so to learn more about these exciting new technologies, please contact a DIB Solutions Consultant today.

Security was of prime concern to the college, as there is free access for all students staying on campus. Therefore, DIB designed a system which locked everything, including all controls, from any unauthorised access. The projector itself was also housed in a security cage, keeping it safe from theft and any external objects. In addition, the control panel and DVD/VCR unit are kept in a locked cabinet, which must be opened before the projector can be activated.

Furthermore, the system also caters for large groups, whereby additional speakers can be plugged in for special occasions when the room is filled with students. The student council has therefore ensured that they have created a facility which will benefit students for many years to come.

FEATURE STORY**IGS'S MULTI PURPOSE AREA FIT FOR A KING**

Recently DIB Australia installed projector and audio visual equipment into Ivanhoe Grammar Schools' Round Square Multi Purpose Area. The solution was developed with Chris Ross from IGS' IT Services. A unique feature of the installation includes a specially designed acoustic system comprised of wall mounted and ceiling speakers. This system creates a balanced sound throughout the area, so that people at the front of the room are not subjected to loud volumes, yet it still enables those people at the back of the room to hear clearly. Simplified control was provided via the Joey Lite controller, whilst network projection was available via the EPSON EMP-835 projector.

Used for conferences, the multi-purpose area recently played host to the International Round Square Conference. As a member of the Round Square group of schools, IGS hosted the 2005 edition of the annual conference, which featured a number of delegates from around the world including King Constantine of Greece and Prince Andrew, Duke of York. For further information about the 2005 International Round Square Conference please visit www.mp05.org.
